The science of combustion is focused on obtaining basic descriptions of combustion phenomena by experimental and mathematical methods. The principles are sufficiently well developed that the subject qualifies as an applied science. Unwanted fires involve specifically the combustion of available fuels in air.

Combustion | SpringerLink

The results of experimental study on excess-air-dependent heat losses and gaseous emissions (NO_x , SO_2 and CO) for a 310 MW fuel oil-fired boiler operating at full and reduced (75 and 50%) loads, are discussed. For the 100% boiler load, data on NO_x emissions indicate the formation of thermal NO along with the fuel and prompt NO . The material balance for SO_x points out the minor formation of ...
