In August 2009, the project was renamed CommonJS to show the broader applicability of the APIs. Specifications are created and approved in an open process. A specification is only considered final after it has been finished by multiple implementations. CommonJS is not affiliated with the Ecma International group TC39 working on ECMAScript, but some members of TC39 participate in the project.

CommonJS - Wikipedia

A web framework (WF) or web application framework (WAF) is a software framework that is designed to support the development of web applications including web services, web resources, and web APIs.Web frameworks provide a standard way to build and deploy web applications on the World Wide Web.Web frameworks aim to automate the overhead associated with common activities performed in web development.
